Governor Jim Justice, a few days prior to their August meeting, directed the state Economic Development Authority (EDA) to back out of a $5.6 million loan guarantee for the $950 million Brooke County Power project.

He later reversed his position when local political leaders, gas, business and labor drew attention to the many reasons his decision was wrong.

Bowing to pressure the Governor seemingly reversed his position and said he would let the EDA decide the issue. A special meeting was held on September 9 and the loan guarantee was approved.

Governor Justice’s initial order to prevent the loan guarantee came within days of a scheduled August 20 meeting of the EDA where the loan guarantee was to be on the agenda.

The decision sent a shockwave through Brooke County.

Delegate Randy Swartzmiller hastily organized an event at the August 25 County Commission meeting to draw attention to the potential loss of thousands of good paying jobs.

“We have a signed agreement that is part of the official record,” said ACT’s Steve White at the meeting. “The agreement guarantees local union workers will build this project.”

At the meeting were Trades representatives Eran Molz, Operating Engineers Local 132 representative and President of the Upper Ohio Valley Building Trades and Bengy Swanson, Co-Chair of Project BEST.

“We thanked the Commission for their support of the project and used the meeting to rally the troops and push back against Governor Justice’s decision to kill the project,” said Molz.

“We also thanked Randy [Swartzmiller] who asked for this to be on the agenda and alerted us to the problem,” said Molz.

Bengy Swanson, Ironworkers Local 549 Business Manager also spoke on behalf of Project BEST where he is Co-Chair. “We [BEST] fully support the Brooke County Power project because it will employ local workers and local subcontractors.”

The project payroll for construction workers is huge, approximately $100 million in wages and benefits.

The additional impact on the economy is also huge, from others involved in construction, the jobs running the plant, supplying the gas, and subcontractors.

Raleigh Solar 1, LLC and the Charleston Building & Construction Trades Council signed an agreement guaranteeing local union construction workers would build the project, if it gets built.

Raleigh Solar is the developer for the $90 million, 90-megawatt solar field in Beckley. They started the permit process in June at the WV Public Service Commission.

The actual power output would be less than the 90-megawatts “name-plate” capacity. The number is derived from a theoretical maximum capacity of the equipment and does not take into account nighttime, cloudy weather, and other conditions that will lower the output significantly.

Dakota Power Partners, based in Colorado, is the company behind Raleigh Solar.

Raleigh Solar 1 & Trades Sign Agreement

Standing up for local construction workers outside the Brooke County Courthouse are (from left) Dan Cassidy, Insulators Local 2; Eric Nutter, IBEW 246; Bengy Swanson, Ironworkers 549 and Project BEST; Bill Davis, IBEW 246; Randy Swartzmiller, Candidate for Senate and current House of Delegates member; DJ Eddy, Painters DC 53; Doug Giffin, IBEW 141; and Jeff Niely, Laborers 809.

WVU, Carpenters, Building Trades Sign Apprenticeship Degree Agreement

When apprentice Carpenters in West Virginia complete their training, they will soon earn not only a Journeyman’s Certificate from the US DOL, they will also get an Associate’s Degree through WVU.

Two agreements were signed on August 27 to start the degree program for the Carpenters and open the door for all craft related apprenticeship programs to do the same.

“We are excited about this partnership with WVU because it will add value to our apprenticeship program,” said Jeremy Jeffers, Training Director for the WV Carpenters Apprenticeship Programs.

WVU President Gordon Gee kicked off the virtual signing event complimenting all participants for their efforts.

“This is a spectacular program … I want to thank everyone on this call and everyone who has worked hard to make this possible,” said Gee. “It is going to be a real game changer for both the University and for the state.”

Credit towards a degree program has been available to apprentices for many years through a variety of Community Colleges. However, the number of credit hours has always been significantly short of the 60 credit hours needed for an Associate’s Degree.

“By adjusting our curriculum and adding some required material, and by WVU looking closer at what we teach, especially the on-the-job training, we were able to close the gap,” said Jeffers.

Jeffers credits WVU professor Sam White with leading the effort. White, a professor at WVU’s Institute for Labor Studies and Research, has led an ad-hoc group of apprenticeship coordinators in discussions about a variety of topics for several years.

“Apprentice coordinators have repeatedly expressed frustration with being unable to get degrees for their apprentices, so we decided to take another look at the process,” said White.

The virtual signing event, held on Thursday, August 27, put two agreements in place.

First was an agreement between the Eastern Atlantic States Regional Council of Carpenters and WVU outlining the expectations and requirements of the degree program. Apprentices will be enrolled at the WVU Keyser campus, but their training will continue as usual at carpenter training locations in Parkersburg, Bridgeport and South Charleston, as well as on-the-job locations across the state.

The second agreement was with the WV State Building and Construction Trades Council.

According to ACT’s Steve White the Memorandum of Understanding with the Building Trades sets out the general parameters for any craft to become involved with the program.

White emphasized there is no requirement any apprenticeship program use WVU, the program is entirely voluntary.

“WVU has found a smart way to close the gap which was preventing apprentices from getting a degree,” said White. “We hope other higher education institutions will take notice and do the same.”

Parkersburg-Marietta Trades Raise $5,000 at their 17th Annual DAD’s Day Clay Shoot

Maybe a bit late, but the Parkersburg-Marietta annual DAD’s Day event still netted more than $5,000 this year.

DAD’s is short for Dollars Against Diabetes, a long-term charitable effort led by North America’s Building Trades to fund diabetes research. Events are usually held around Father’s Day each year.

According to Buddy Malone, Business Manager of the Council, 23 shooters participated and 13 organizations sponsored the event which was held at Hilltop Sports LLC in Whipple, Ohio.

“We debated whether to postpone this year but decided we could have the event, social distance as needed, and give everyone an opportunity to enjoy a day among friends,” said Malone. “I am glad we did; good people, good food, good time and a great cause.”

Sponsors included: Worley; ACT OH/OH State Building Trades; WV State Building Trades/ACT WV; Parkersburg Area Labor Council; UA Local 565; UA Local 168; United Bank; Davis Pickering; Ironworkers 787; Parkersburg-Marietta Contractors Association; Ruble Insurance Agency; Polymer Alliance Zone and Boilermakers 667.

$950 Million Project

Continued from Page 1

maintaining the plant and the taxes paid.

Outside the meeting were other craft representatives showing support for the $950 million project.

Governor Justice was asked about his decision to kill the project the next day at an August 26 press conference.

He claimed he didn't want to kill the project but had many questions which led to his decision.

One of the questions he had was whether local construction workers would build the project.

“That's the same argument the group funded by Murray Energy used when trying to stop the project at the PSC,” said White. “They ignore the signed agreement and act like having a few people from across the border is terrible,” said White. “There is no group more active in demanding local workers than the Trades and to say you are concerned there won't be local workers when we have a deal just makes no sense.”

Energy Solutions Consortium, the developers of Brooke County Power, has been working on the project for years and had been working with the EDA for months on the loan guarantee.

The project has encountered many delays including a permit challenge by a group called the Ohio Valley Jobs Coalition who admitted they were funded by Murray Energy, a coal company that supplies steam coal to electric power plants.

After losing their permit challenge at the state Public Service Commission the group appealed to the WV Supreme Court.

While they lost their case, the appeal cost the project many months of delay.

“It's seldom talked about in the press, but the coal industry has been fighting gas projects for a number of years,” said White.

“Killing gas projects in West Virginia will hurt our communities and help Ohio and Pennsylvania get more projects, but it won't help the coal industry.”

Delegate Phil Diserio (D-Brooke) places a yard sign as he campaigns for re-election to the WV House of Delegates. Diserio is also a member of IBEW Local 246 and has been a staunch defender of working families while serving in the legislature.
Absentee Ballot Application is Online, Starting September 18 Ballots Mailed

Friday, September 18 is the start of voting for many who have requested an absentee ballot. That is when county clerks will begin to mail ballots to those who have sent in a request.

Anyone who is registered to vote and wants to vote by mail for the upcoming 2020 General Election can now easily apply online for an absentee ballot.

At the website govotewv.com you can enter your request. Note: Internet Explorer 10 Web Browser is currently not supported.

For this election anyone who wants an absentee ballot can get one. In the past you had to have a specific reason like being unable to get to a polling place.

Most voters will not get absentee ballot applications automatically in the mail like they did in the primary. Only a few counties are sending applications to all voters.

Starting September 18 county clerks will start mailing ballots to those who have applied. Absentee ballots can be requested thru October 28, but it is strongly advised not to wait until the last minute.

The $4.9 million solar field is part of Toyota’s overall effort to reduce emissions.

The project could be the largest solar field in the state.

However numerous larger projects are in the development phase such as the 90 megawatts Raleigh Solar project in Beckley.

According to Breedlove two Putnam County contractors are involved, Raynes & Sons Excavation is doing site work and Nitro Construction Services will build the solar array.

“Toyota has been a great job creator for local union construction workers, and we appreciate their continued use of local workers and contractors,” said Breedlove.

Raleigh Solar

Continued from Page 1

The Memorandum of Agreement between the Trades and Raleigh Solar was signed on August 19. Since the project is in the early stages of development the agreement is not a project labor agreement but rather a commitment to reach a PLA at the proper time.

“The agreement says that when the project has a general contractor we will negotiate a project labor agreement which must include the going wage rates and benefit packages in local contracts of Building Trades affiliates,” said Paul Breedlove, Business Manager for the Charleston Building Trades.

“We look forward to building the project and will assist the developer getting it through the process in any way we can.”

On September 1 the project reached another milestone.

The Raleigh County Commission approved a tax plan regarding property tax payments.

The state PSC is scheduled to take testimony for the project’s siting certificate at a hearing in Charleston on September 18.

ACT and the WV State Building Trades have intervened in support of the project and will provide testimony about the MOA and about the positive economic impact local construction hiring will have on the economy.

The project would use around 530 acres off Grandview Road in Beckley. A high voltage line currently runs through the center of the proposed site where there is an adjacent substation.

According to the project website the solar array could be operational in late 2022 or early 2023.
